

## Elektronika skeemitähised

Takisti (resistor)

Potentsiomeeter (muutuva takistusega takisti, potentiometer, variable resistor)

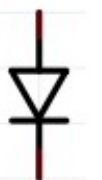

Fototakisti (photoresistor, LDR)

Kondensaator (capacitor)

Elektrolüüt kondensaator, polariseeritud (electrolytic / polarized capacitor)

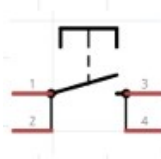

Diod (diode)

LED, valgusdiod (light emitting diode)

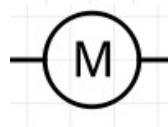

Lülitid (switch. joonistel tüüp SPST ja SPDT)

Surunupp, lüli (button, pushbutton, tactile switch ..)

Induktor, drossel, mähis (inductor, inductance)

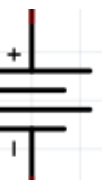

Mootor (motor)

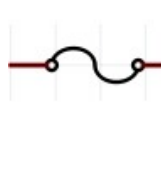

NPN transistor

PNP transistor

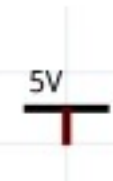

Patarei, aku (battery)

Kaitse (fuse)

Maa (ground), GND – sümboolne, kõik sellise tähisega kohad on ühendatud omavahel kokku ja toite miinus poolega.

VCC, toitepinge – sümboolne, kõik sellise tähisega kohad on ühendatud omavahel kokku ja toite pluss poolega.
